

MobiFex on iPhone

Open iTunes or iPhone / iPod touch App Store.

Search for MobiFex. Download and install the free app as usual.

Once the app is installed on your device tap the MobiFex icon. You will see the initial screen.

Enter the Samfex URL as provided by your administrator. For hosted Samfex installations contact Mellex support and request a mobile URL for your installation.

Enter your Samfex username and password. MobiFex will download the initial database configuration. Depending on your Samfex database size and network connection this might take up to 10 minutes.

Later changes can be done within the settings option on your iPhone or iPod touch.

ATTENTION: iTunes account is required for download.
